

SIMON BACKUP

SIMON BACKUP

Peace of Mind comes with simple, secure, and reliable data protection. SimonBackup's interface is designed to be just what you need: Backups made simple.

Fact: All computers crash and all hard drives fail.

Fact: Most people are now storing their digital pictures, videos, and email only on their computers. The one thing that most people who's houses burn down say: "I just wish I had my pictures."

Fact: Most small businesses fail to properly backup their data leading to the second most common cause of business failure: irretrievable data.

Fact: Unbelievably, and illegally, most small doctors offices, clinics, and veterinary hospitals lack the sophistication to properly backup their data (*your health records*), so they don't.

Fact: One extra copy of your data on-site is great, but does nothing to *protect* you from fire, theft, vandalism, flood, or other disaster.

Fact: Most backup providers are new to business. Simonbackup.com is operated within a 50+ year old group of companies.

Fact: Trying to backup your data online has been a giant pain. SimonBackup.com has made online backups a lot *easier*. For details visit www.simonbackup.com

Storage	Monthly Fee	Annual Fee	Setup Fee
5gb	\$10	\$100	\$25
10gb	\$15	\$150	\$25
20gb	\$25	\$250	\$25
50gb	\$50	\$500	\$25

Seed load (not mandatory) fee is \$149. Seed loading fee includes the one time Setup fee and three months of SimonBackup service and on-line tech set up assistance if needed. Three free months and on-line set up assistance and free postage is included with Seed Loading.

Seed Loading....

Seed loading will speed the initial upload and make your setup a lot easier. When you opt for seed loading, SimonBackup sends a blank 300gb USB hard drive to you via FED-EX. You use the "Seed-Load Utility" that comes with SimonBackup and make your initial backup on the seed-load hard drive. Using an included pre-paid FED-EX box, you send the seed load harddrive to SimonBackup where we transfer your data (encrypted) to our server. The next scheduled backup will run very quickly, reliably, and without taxing your internet connection for days. Seed loading includes return postage and three months of backup service.

Automation is key to making things simple. You set the schedule. Online backups can be done hourly, daily, weekly, or monthly.

Backup only the information you want. Backup information in most cases with a single click. Backup your home or business computer, laptop, and/or your local network drive. Restore files whenever you want on your own schedule at no additional cost.

Security.

Built-in using military-grade AES or Blowfish encryption using a password you supply. Nobody at Simonbackup or anywhere in-between will be able to see your data. Further, your data will be co-located (meaning in duplicate) at two of our secure facilities many, many miles apart.

Non-geeks: no worries!

Hassle-free personal setup is included with seed-loading. Setup includes personal assistance setting up your first backup (if you need it) via live remote control using English-speaking (or Spanish if you prefer) technicians located here in the United States.

Simple Administration:

If there is ever a problem, SimonBackup sends you an email and tells you. Whether it is a locked file, or your computer was off when a backup was scheduled, you'll know it. And not have to worry about it.
